

HOW TO SETUP CHATSTOPUP

LOG IN TO YOUR CPANEL

UPLOAD THE FILES

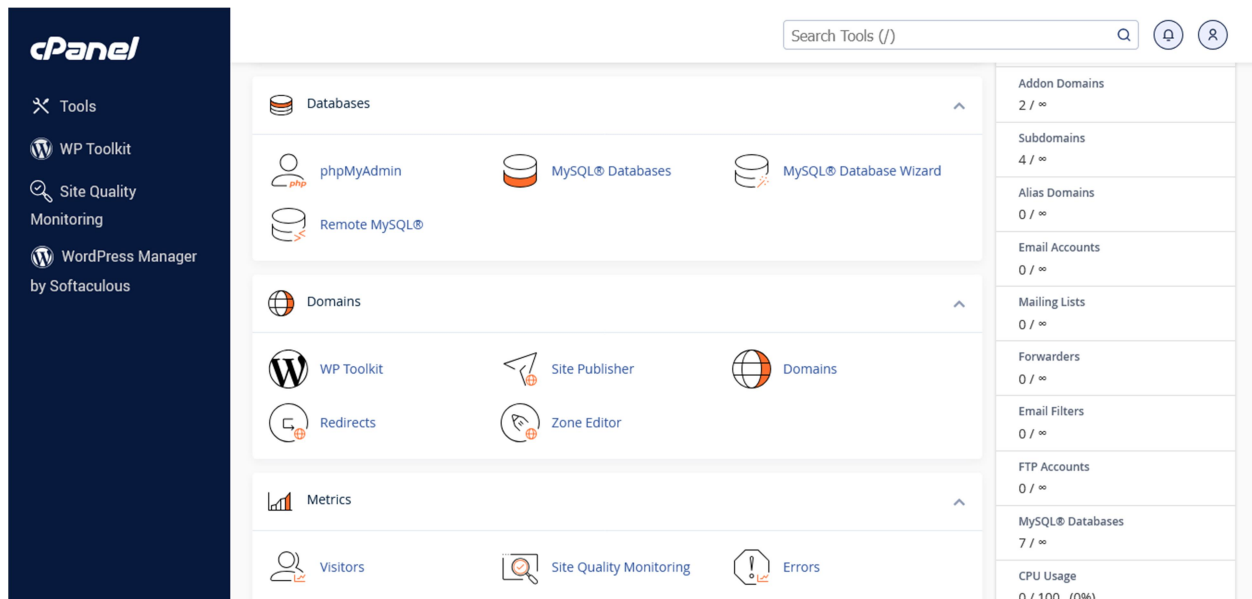

Go to your File Manager and create a folder in any directory that you wish.
For this illustration, let's assume to create a folder in the `public_html` folder and call it **watzbiz**.

So, upload the **app** folder which you got from the **chatstopup_bundle** zipped file. Obviously, you must have extracted the **chatstopup** folder.

Let's say that the domain is <http://abcd.com>, so it means that the files would be at <http://abcd.com/watzbiz/app>

Hope you got that?

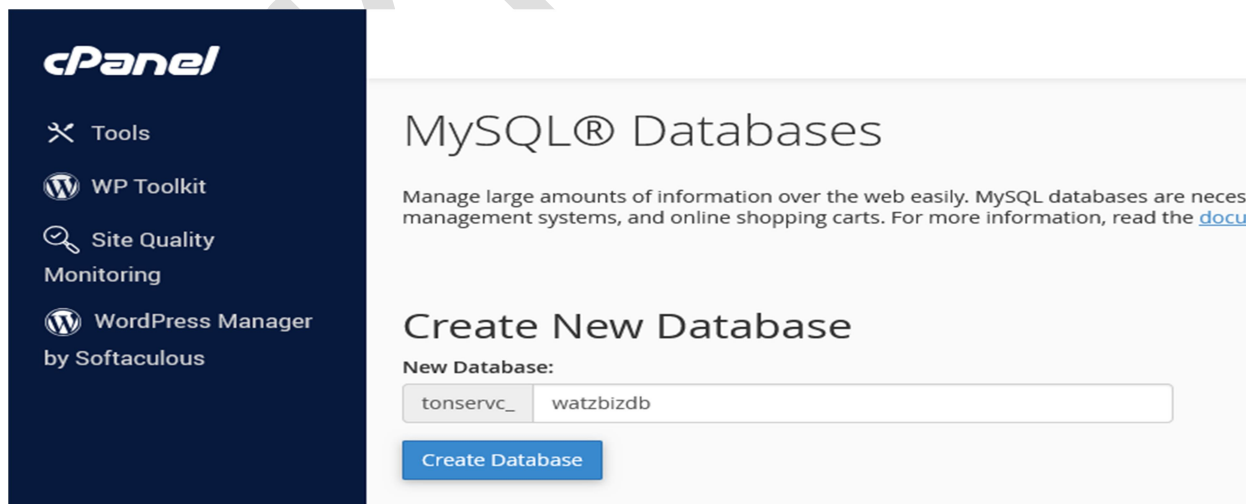

SET UP THE DATABASE

Click on the MYSQL Databases

Enter your preferred database name. For this illustration, we'll use this name **watzbizdb**

So based on the username extension on the hosting, the database is **tonservc_watzbizdb**

Scroll down to Create a User for the Database

We'll call the user **watzbizuser**

The screenshot shows the cPanel interface with a dark blue sidebar on the left containing the cPanel logo and navigation links: Tools, WP Toolkit, Site Quality Monitoring, and WordPress Manager by Softaculous. The main content area is titled 'MySQL Users' and 'Add New User'. It contains a form with the following fields: 'Username' (with a dropdown set to 'tonservc_' and a text input containing 'watzbizuser'), 'Password' (empty), 'Password (Again)' (empty), and 'Strength' (displaying 'Very Weak (0/100)'). A 'Create User' button is at the bottom left of the form. A 'Password Generator' button is located to the right of the strength indicator.

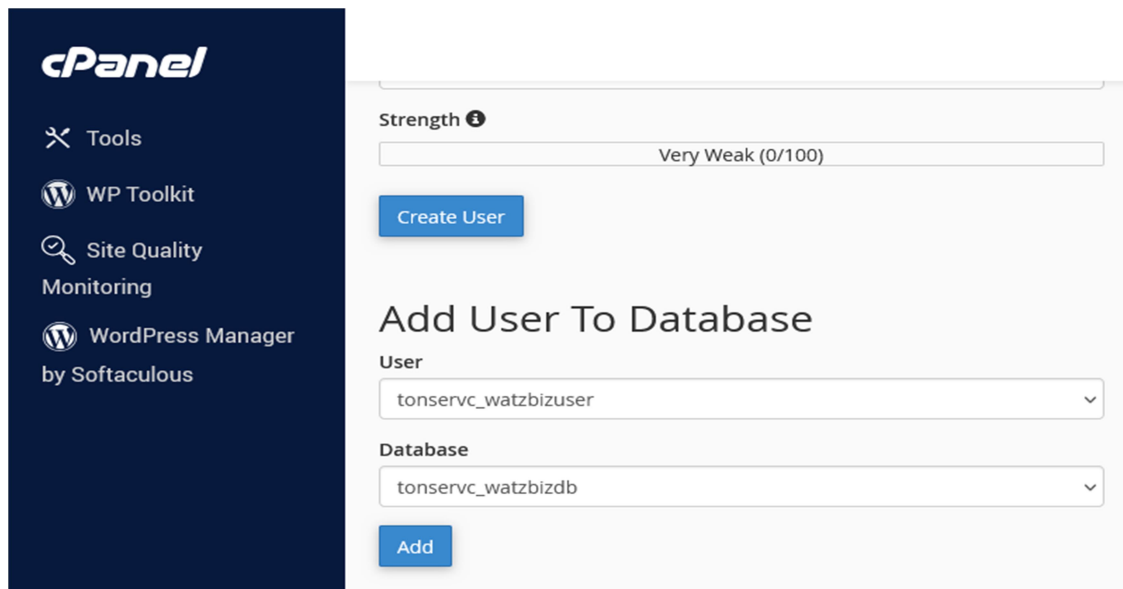

So based on the extension of the hosting, the username is **tonservc_watzbizuser**

You can add the password yourself or use the Password Generator. For this illustration, I will use the password generator. Password is **t,YESK)4#p)Q**

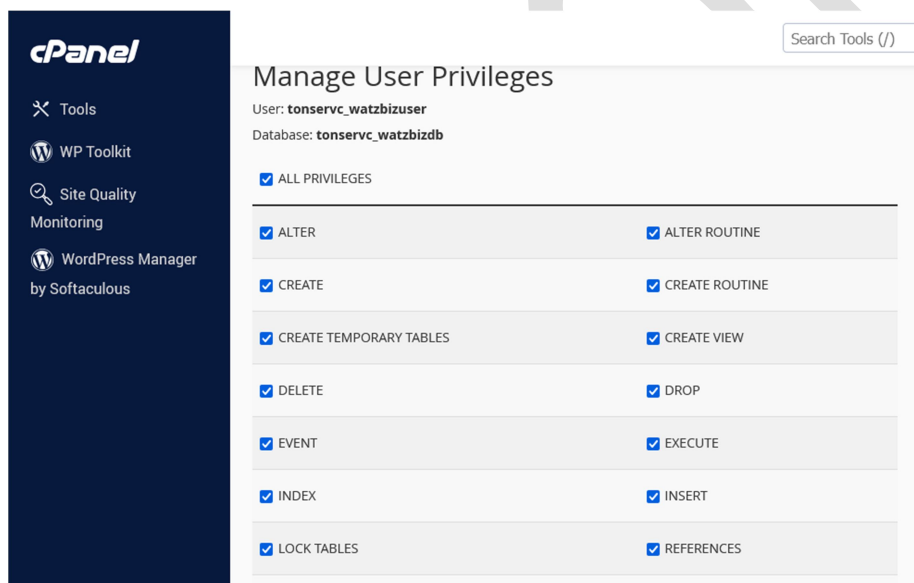

This screenshot shows the same 'Add New User' form as the previous one, but with the 'Password Generator' modal window open. The modal has a 'Close' button in the top right. It contains a text input field displaying the generated password 't,YESK)4#p)Q', a 'Generate Password' button, and a link for 'Advanced Options »'. Below this is a checkbox labeled 'I have copied this password in a safe place.' At the bottom of the modal are 'Use Password' and 'Cancel' buttons. The background form is dimmed, showing the 'Create User' button and the 'Add User To Database' section below it.

Click the Create User

So, let's add this user to the database and assign privileges. Just scroll down to do just that.

Check All Privileges box and Click Make Changes

So far we have completed this;

DATABASE: tonservc_watzbizdb

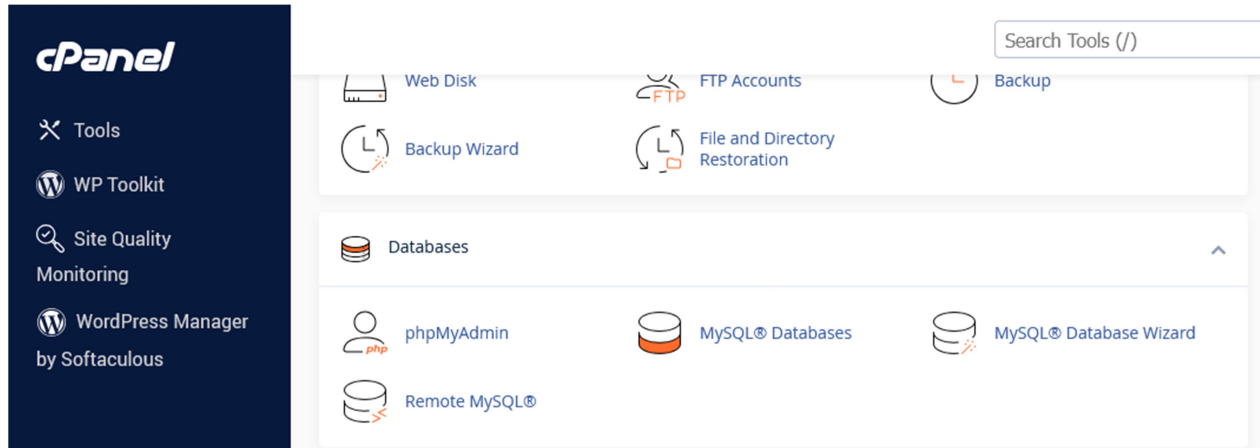

USER: tonservc_watzbizuser

PASSWORD: t,YE\$K)4#p)Q

UPLOAD THE DATABASE

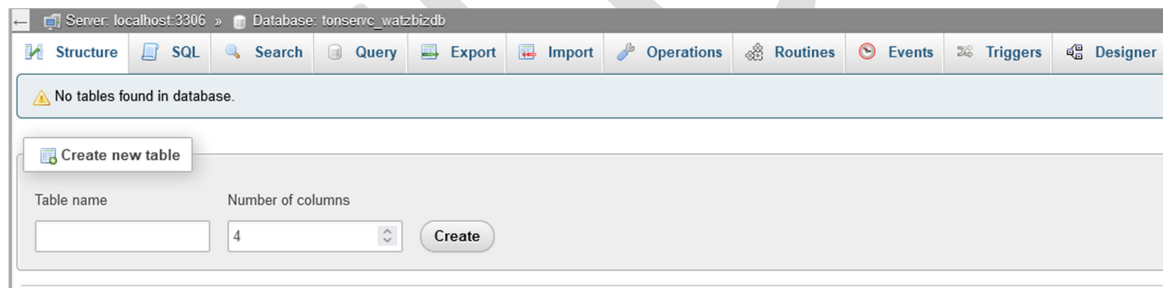

In the **app** folder there is the **dbsrc** folder; open this folder to locate the **chatstopup.sql** file.

Go to PHPPMyAdmin

Click Databases and Select the **tonservc_watzbizdb** database

Click Import to browse and load the **chatstopup.sql**

You have successfully imported the database and the tables.

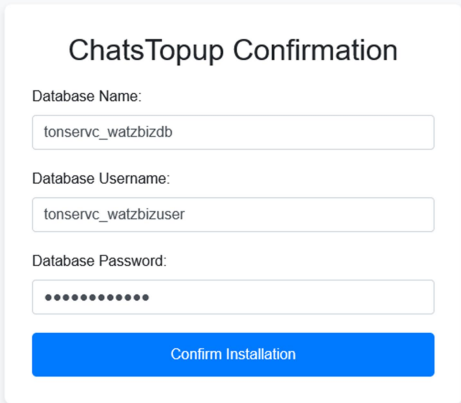

SETUP THE WEB APP

The URL is <http://abcd.com/watzbiz/app> but you cannot use it now till you complete the set up (You can check the illustration on page 1)

Ensure you use the right URL where you uploaded the app folder

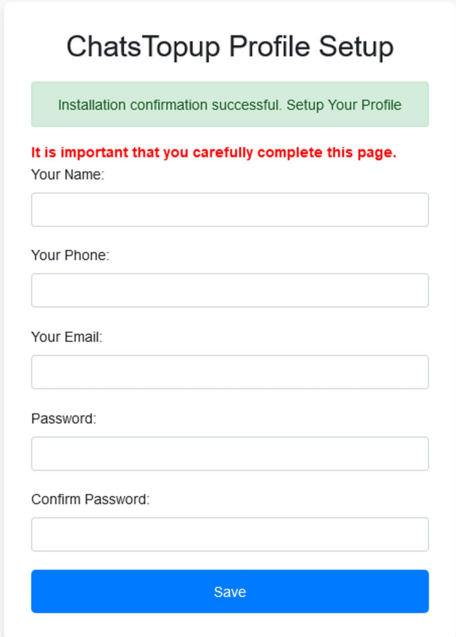

So, let's confirm if the setup is fine.

Go to <http://abcd.com/watzbiz/app/confirm>

The image shows a 'ChatsTopup Confirmation' form. It has three input fields: 'Database Name' with the value 'tonservc_watzbizdb', 'Database Username' with the value 'tonservc_watzbizuser', and 'Database Password' with masked characters. A blue 'Confirm Installation' button is at the bottom.

After successful confirmation, you will be moved to the next step to setup your profile

The image shows a 'ChatsTopup Profile Setup' form. At the top, a green box says 'Installation confirmation successful. Setup Your Profile'. Below it, a red warning message states 'It is important that you carefully complete this page.' The form contains five input fields: 'Your Name', 'Your Phone', 'Your Email', 'Password', and 'Confirm Password'. A blue 'Save' button is at the bottom.

Fill in your details...

Upon successful setup, you will be redirected to the login page

The login page would now be at <http://abcd.com/watzbiz/app/>

CONFIGURE THE ACCESS (MOBILE VIEW)

Ensure you fill the details properly and follow the instructions on the page.
The one-time activation code must have been sent to you.

Welcome, **ibukunoluwa** Vendor

[← Configure](#)

Configuration

This one-time configuration is for the airtime and data. After configuration, you will;

- Get the Whatsapp link and keyword for your phone where your customers can buy airtime data
- Get the download link for the Autoresponder WA Premium app
- Get the configuration settings
- The step-by-step video to setup the app on your phone
- **ENSURE YOU ENTER CORRECT DETAILS. YOU WILL NOT BE ABLE TO REVERT ACTION!**

Business Name

Whatsapp No

This is your Whatsapp number that your users will interact with. Format 080XXXXXXX

Keyword

The keyword will be used to start or trigger the bot on your whatsapp number to sell airtime and data. For example, if your vtu business name is "JIGI RECHARGE", you might use "JIGIRECHARGE" as your keyword. In creating the keyword, a 'PORTAL' suffix will be automatically added to it. This means once your customers sends "JIGIRECHARGE PORTAL" to your whatsapp number then the bot will start working.

Activation Key

CONFIGURE

Once you are done then you can proceed to connect your airtime API, Data API and payment gateway. You only need the api keys to connect as required by the platforms

The interface is straight forward. If you have any issues kindly reach me @ibklord

SETTING UP THE AUTORESPONDER WA MOBILE APP FOR THE AUTOMATION

After a successful configuration, you will see the server URL on the configuration page.
This is all that you need to setup the Whatsapp bot on your phone.

Your server URL for the Whatsapp bot will look like this;

<http://abcd.com/watzbiz/app/webapi/>

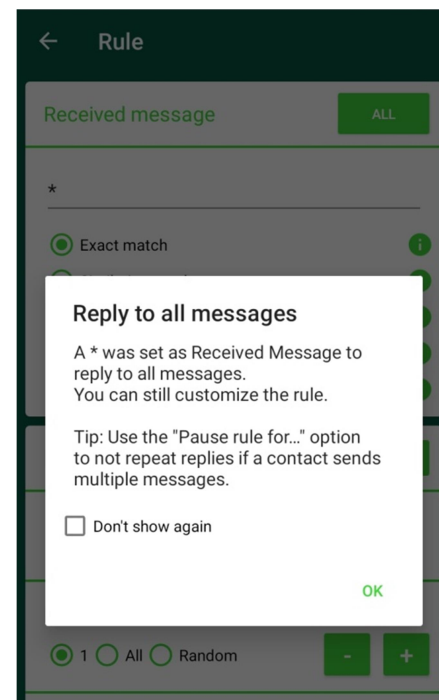

Launch the AutoResponder WA

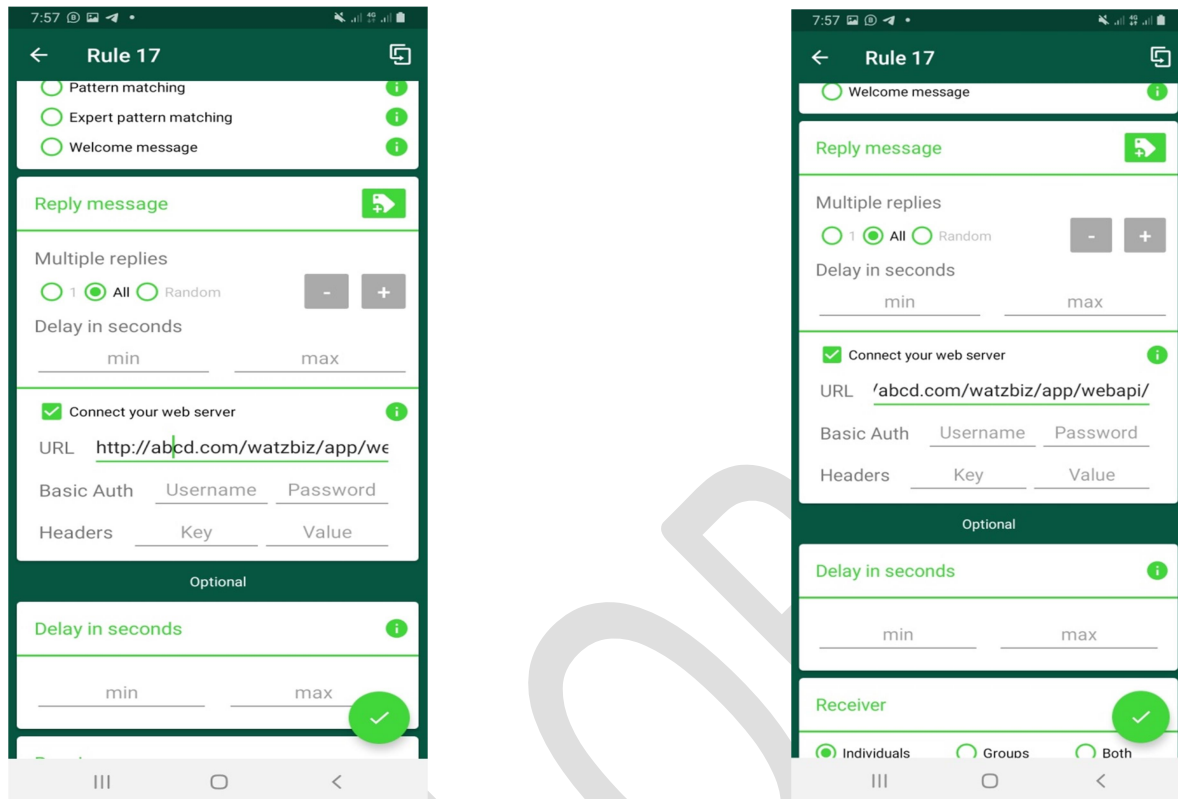

Toggle the Green button to turn it on
Click the Add button to create a rule

Reply to all messages should be the mode

Check the connect your web server and enter the server URL from the Web app

Click the Green Mark button to complete the process.

Your Autoresponder WA is now connected to your Web app

HOW IT WORKS

When your customers send the **keyword** or **keyword + PORTAL** to your whatsapp number then the bot will start responding to the messages.

For instance let's say your keyword is **COOLCASHVTU** and your customer sends **COOLCASHVTU** or **COOLCASHVTU PORTAL** to your whatsapp number, it would automatically trigger the bot and it would start responding.

Your Whatsapp bot link should look like this;

<https://wa.me/234XXXXXXXXXX?text=GGGG%20PORTAL>

234XXXXXXXXXX = Your whatsapp number

GGGG = Your keyword

If you have any issues kindly reach me @ibklord
